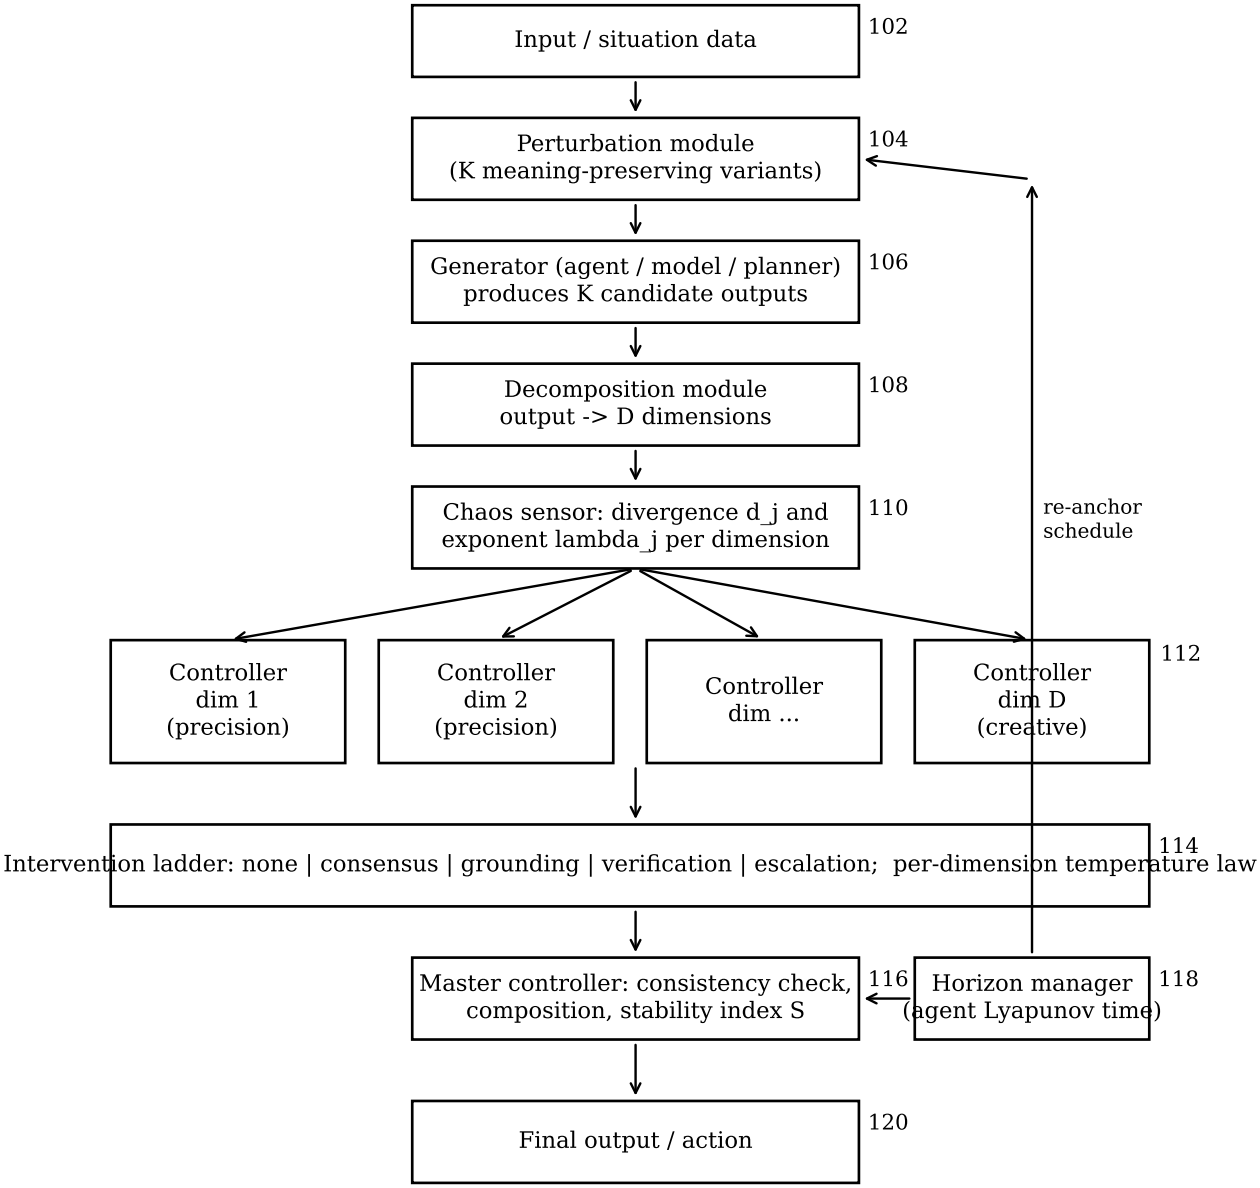
FIG. 1



Input / situation data
102
Perturbation module
(K meaning-preserving variants)
104
Generator (agent / model / planner)
produces K candidate outputs
106
Decomposition module
output -> D dimensions
108
Chaos sensor: divergence d_j and
exponent lambda_j per dimension
110
re-anchor
schedule
Controller
dim 1
(precision)
Controller
dim 2
(precision)
Controller
dim ...
Controller
dim D
(creative)
112
Intervention ladder: none | consensus | grounding | verification | escalation; per-dimension temperature law
114
Master controller: consistency check,
composition, stability index S
116
Horizon manager
(agent Lyapunov time)
118
Final output / action
120
